

Shlok Ahir

Full Stack developer | shlokahir2002@email.com | +91 6355616642

PHP Developer with 1 year of combined hands-on experience, including a 1 year professional role and a 4-month internship. Proficient in developing scalable and maintainable web applications using Core PHP. Experienced in working with RESTful APIs and both relational (MySQL, PostgreSQL) databases. Skilled in creating responsive, user-friendly interfaces with Bootstrap, Tailwind CSS, and custom CSS.

Work Experience

Epicalyx solutions – Ahmedabad oct 2024 – Jan 2025

backend developer Intern

- Gained foundational experience in PHP development and understood real-world web application structures.
- Worked with the MVC architecture to build dynamic web pages connected to MySQL databases.
- Collaborated with the development team to improve code quality and follow best practices for clean, maintainable code.
- Applied theoretical knowledge in practical scenarios, laying the groundwork for future backend development work.

Antinoob solutions – Ahmedabad Feb 2025 – Now

Full-stack developer

- Developed scalable and efficient web applications using PHP and Laravel, with a strong focus on backend logic and performance.
- Built responsive, user-friendly interfaces with Bootstrap, Tailwind CSS, and custom CSS to enhance user experience.
- Collaborated with cross-functional teams including design and product to implement and refine features. Diagnosed and resolved complex issues, contributing to high-quality, maintainable code in a fast-paced environment.

Education

CHIMANBHAI PATEL INSTITUTE – Ahmedabad 2020 - 2023

Bachelor Degree in Computer Application **(BCA)**, **GPA: 7.84**

GUJARAT UNIVERSITY – Ahmedabad 2023 - 2025

M.sc.IT Mobile Application, **CGPA: 8.91**

| • Frontend Skills : Custom CSS, Tailwind CSS, Bootstrap | • Software Skills : Figma, Android Studio |
| • Database Skills : MySQL, PostgreSQL, MongoDB | |

Projects

Gift Touch

PHP, MySQL, Bootstrap, Tailwind CSS, Excel Import/Export, Generate Order Mail

A business-to-business (B2B) web portal developed for Gift Touch, enabling streamlined company and product management through a robust admin and user system.

- Built a dynamic multi-company platform where unique company URLs are generated automatically, enabling company-specific access to features.
- Implemented admin features like bulk user creation, Excel import/export for users and orders, product and category management, and division-based structuring.
- Developed role-based access where company users can log in to view assigned products and place individual product orders. Enabled comprehensive order tracking and seamless UI integration across admin and company-side panels.

Projects

Docto Club – Doctor Event Platform

PHP, PostgreSQL, RESTful APIs, Twilio SMS, Google Notifications

Developed a comprehensive event management platform tailored for doctors, featuring a full admin panel and user engagement system.

- Designed and implemented admin functionalities including event, event category, and user management, plus monitoring user posts and activities.
- Created secure RESTful APIs with bearer token authentication for all app functionalities.
- Integrated Twilio SMS for OTP-based user registration and login, enhancing security and user experience.
- Enabled real-time notifications using Google Notification API for events, likes, comments, and replies.
- Developed user features such as event browsing, posting, commenting, liking, feedback submission, and profile updates.

Architect Admin Management Software

PHP, MySQL, Tailwind CSS, REST APIs

Developed an all-in-one admin management system tailored for architecture firms to streamline project oversight and team collaboration.

- Created modules to manage projects, site activities, tasks, team coordination, and financial transactions within a unified platform.
- Designed a clean, responsive user interface using Tailwind CSS and Bootstrap for seamless user experience.
- Integrated RESTful APIs to enable dynamic data handling and smooth communication between frontend and backend.
- Improved productivity and project tracking by automating routine workflows and centralizing management tasks.

ParadiceEvents – Frontend Development

HTML, CSS (Custom & Animated), JavaScript

Designed and developed a fully custom, highly animated frontend for ParadiceEvents, focusing on visually engaging and responsive user experience.

- Built unique, hand-crafted CSS animations to create dynamic and interactive UI elements.
- Implemented a fully custom design ensuring brand consistency and high performance across devices.
- Ensured responsiveness and smooth user interactions with clean, semantic HTML and optimized CSS.

Mail and Print – Online Print Customization & Ordering System

PHP, JavaScript, MySQL, Stripe API, Dynamic Image Preview

Developed a feature-rich online platform offering customizable printing services across four categories: Quick Print, Blueprint, Photo Print, and Cards.

- Built dynamic user interfaces allowing real-time previews based on selected options like paper size, print type, orientation, and color.
- Developed service-specific modules supporting complex input combinations (e.g., image/PDF uploads, SPOT UV, shape, coating, and quantity settings).
- Integrated Stripe for secure online payments and implemented order management functionality for users and admins.
- Created a fully dynamic admin panel for managing service configurations, tracking orders, and monitoring uploaded files.
